

The screenshot shows the AttaTime software interface. The main window displays a race results table with columns for Bib, Start, Name, Cat, Laps, Ri, Lap1, Lap2, Lap3, Lap4, Total, Standard, Pla, StdPlace, Bib, Time, and F. A floating Stopwatch window is overlaid on the main table, showing a time of 21:25:34.9. On the far right, there is a separate Results window for the TAG timer, also showing a list of bib numbers and times. The Stopwatch window is accessed from the Tools menu. The main table has a highlight in the Place column (Bib 16) and the Stopwatch window highlights the stopwatch times for that bib number (green).

Bib	Start	Name	Cat	Laps	Ri	Lap1	Lap2	Lap3	Lap4	Total	Standard	Pla	StdPlace	Bib	Time	F
1	0:00:30	Jason Moyle	HC	2		0:27:17	0:38:13			1:05:30.1	-0:18:39	58	58	1	0:03:55

The ATTime screen (above) showing the Stopwatch (SW) areas on the right. On the far right a separate SW column window is set for the TAG timer. Overlying the main window is a floating SyncClock window, accessed from the Tools menu. Note the highlight in the Place column (Bib 16) also highlights (green) the stopwatch times for that bib number.

(Below) Laptop connections for MBP. The power connection comes from a battery supplying only the laptop and uses the power adaptor stored in the battery bag. It is best to keep this power supply as far away from the detector loop as possible.

(Above) Connections to the TAG. The power comes from the battery also serving the Decoder; the cable is kept in the battery bag and the plug can only be inserted in one orientation. Banana plugs for the handswitch can be inserted into sockets: 1 or 2; polarity is not relevant.

(Below) Connections to the Decoder; the power cable plug must be aligned accurately and removed by pulling straight, gripping the knurled shroud; the cable lives in the battery bag. Ethernet cable and Coax live in instrument case !A"
